# JULIAN CALENDAR CONVERSION CHART

Please use this calendar as a reference guide to tell when your juice will expire.

**ONE DEGREE WILL AFFECT PRODUCT-KEEPING QUALITY!**  
Check the temperature of your juice refrigerator daily. Target temperature should be 40 degrees or less.

### Temperature Control is Important.

Storage temperature of juice products has a direct relationship to shelf life. Average shelf life of juice at 40° F or less is 21 days. At higher temperatures, a rapid decrease in shelf life occurs. In addition to temperature, the age of product affects keeping quality. Proper code rotation in the refrigerator is very important.

Storage temperature of juice products has a direct relationship to keeping quality of shelf life.

This shows the relationship graphically. It should be posted where consumers can see it.

Besides temperature, age of product affects keeping quality. Proper rotation in the Juice case is very important. Proper rotation plus storage below cooling level in a display case equals good products for the consumer.
